

# Pre-Kindergarten – 1<sup>st</sup> Grade Students: Nemeth Code within UEB Contexts and Strategies for Supporting the Student in Building Math Skills

## Lesson 4: Formatting Materials for Students in the Early Grades

University of South Carolina Upstate, Spring 2020

# Lesson 4 Objectives

Participants will be able to:

1. Locate and use formatting resources
2. Format the following:
  - Centered headings
  - Braille page numbers
  - Directions
  - Problems
3. Make decisions on when to use Nemeth numbers and manipulatives

# Formatting Materials for Young Students

Predictable materials allow students to:

- Develop efficiency
- Focus on content
- Quickly scan the page with their hands and learn what is included in the document.

# Resources to Use in Formatting Materials for Young Students

- *Braille Formats: Principles of Print-to-Braille Transcription, 2016* referred to as “Braille Formats.”
  - <http://brailleauthority.org/formats/formats2016.html>
  - Available from the Braille Authority of North America (BANA)
  - *Braille Formats* is for transcribers, but TSVIs need to understand many of the concepts explained.
- As of March 2020, BANA has approved new guidelines for transcribing early educational materials.

# Line Spacing

- Double-space materials for young learners.

Exceptions, single space:

- Puzzles
- Spatially aligned problems
- Tables
- Titles of tactile graphics

# Print Worksheet Example

The diagram illustrates the layout of a worksheet. A grey arrow labeled "Title" points to the text "Addition Practice" which is centered above "Worksheet 1". Another grey arrow labeled "Directions" points to the text "Add." which is positioned to the left of four addition problems. Each problem consists of a number, a plus sign, another number, and a horizontal line underneath.

Add.

$$\begin{array}{r} 3 \\ + 2 \\ \hline \end{array}$$

$$\begin{array}{r} 1 \\ + 0 \\ \hline \end{array}$$

$$\begin{array}{r} 2 \\ + 2 \\ \hline \end{array}$$

$$\begin{array}{r} 0 \\ + 3 \\ \hline \end{array}$$

# Centered Headings

- Center the title of a worksheet.
- Place the title on the first line of the page, and leave two blank lines after the heading.
- Divide long headings across multiple lines.
- Follow print capitalization when brailleing headings.
- Changes in typeform that are just “pretty” are not needed in braille.

# How to Center a Heading

- Begin by counting the number of cells needed to transcribe the title in braille.
- Count:
  - Letters
  - Contractions
  - Spaces
  - Punctuation
  - Indicators (e.g., capital indicator)
- Subtract the number of cells needed for the title from the number of cells in a line (usually either 32 or 40).
- Divide the difference by 2.

# Example of a Centered Heading (continued)

Addition Practice  
Worksheet 1

Add.

3	1	2	0
<u>+ 2</u>	<u>+ 0</u>	<u>+ 2</u>	<u>+ 3</u>

- The title is centered.
- Two blank lines follow the title.
- Print capitalization is followed.

Braille representation of the worksheet content, including the title, blank lines, and the four addition problems.

40 - 17 = 23  
23 ÷ 2 = 11.5  
Begin in cell 12.

# Activity 4A

Decide if each statement is true or false.

1. The title of a worksheet always begins in cell 5.
2. Long titles can be divided across two or even three lines when necessary.
3. Follow print capitalization when braille headings for a kindergarten student.
4. Most materials for students in first grade are triple-spaced.

# Activity 4A: Answer Key

1. **False** – The title of a worksheet is centered.
2. **True** – Long titles can be divided across two or even three lines when necessary.
3. **True** – Follow print capitalization when braille headings for a kindergarten student.
4. **False** – Most materials for students in first grade are double-spaced.

# Directions Preceding Numbered Problems

## Comparing Numbers

Write  $>$ ,  $<$ , or  $=$  in the blank.

1. 79 \_\_\_\_ 57

2. 15 \_\_\_\_ 21

3. 32 \_\_\_\_ 36

4. 90 \_\_\_\_ 13

- When directions precede numbered problems, they begin in cell 5 with runover lines beginning in cell 3.
- There are two blank lines between the title and directions.
- There is only one blank line after the directions.

Braille representation of the title 'Comparing Numbers'.

Braille representation of the directions: 'Write >, <, or = in the blank.'

Braille representation of the first numbered problem: '1. 79 \_\_\_\_ 57'.

Braille representation of the second numbered problem: '2. 15 \_\_\_\_ 21'.

Braille representation of the third numbered problem: '3. 32 \_\_\_\_ 36'.

Braille representation of the fourth numbered problem: '4. 90 \_\_\_\_ 13'.

Braille representation of the end of the page.

# Numbered Problem with Subdivisions

1.  $7 + \underline{\quad} = 12$   
a. 6  
b. 7  
c. 5  
d. 9

- Begin problem in cell 1 with runover in cell 5.
- Answer choices begin in cell 3 with runover in cell 5.

# Example of a Numbered Problem with Subdivisions

4. My cousins made cupcakes. Maria made 6 cupcakes, and Jorge made 3. Which equation shows how many cupcakes they made altogether?

a.  $6 + 3 = 8$

b.  $3 + 8 = 11$

c.  $6 + 3 = 10$

d.  $6 + 3 = 9$

# Page Numbering

- All page numbers are in UEB.
- You must leave 3 braille cells between the text on the line and the page number.
- The **braille page number** is placed at the end of the last line on each page.
- **Braille page numbers** are consecutive: 1, 2, 3, etc.

# Activity 4B

## Addition Fun

Fill in the missing number.

1.  $1 + 5 = \underline{\quad}$

2.  $1 + 7 = \underline{\quad}$

3.  $2 + 4 = \underline{\quad}$

Write your answer. You may use your counting bears.

4. There are 3 girls and 4 boys in the bus. How many children are there altogether?

# Special Considerations

- Teachers may elect to use Nemeth numerals throughout all math materials for young learners.
- When pre-kindergarten and kindergarten students are given pictures of objects to count, use manipulatives such as:
  - Counting bears
  - Base ten blocks
  - Digi-blocks
- Use simple tactile shapes (e.g. circles, squares) on worksheets.

# Interlining

- Interline braille material by writing above the braille.
- Interlining above the braille, allows the student's hands to be on the braille and the adult to see the print.
