

6 Tips for Teaching Mathematical Literacy

by Charlotte Cushman

1. Provide frequent opportunities to count everything.
2. Offer daily exposure to numbers in the context of routine.
3. Help children to develop an understanding of basic mathematical concepts.
4. Provide the opportunity for children to explore and sort materials to learn about these concepts.
5. Create opportunities for children to develop the concept of one-to-one correspondence.
6. Provide consistent hands-on exposure to concrete items or manipulatives to sort, to compare (more/less, bigger/smaller), and to count.
