

CVI High Contrast Instructional Easel Template

This Easel Template is great for making tactile calendars, first/then boxes, story sequence boxes, and using for instructional purposes such as vocabulary. Made with 8.5 x 11 cardstock, you can put these together quickly and on the go. Print the template and cut the cardstock.

Fold each corner to the edge
to make an X. Cut the
bottom right to the center.

This becomes the ledge. There is no
need to fold the gray line.

1. Fold the top right corner to the bottom left.

2. Fold the top left corner to the bottom right.

This will leave you two creases in the form of an “X” in the middle of your cardstock.

3. Cut the crease from the bottom right to the center.

Make sure the creases are well pressed. Roll the cut edge into the center of the easel and you will have a ledge. Tape or glue it to keep it secure.

This Easel Template is great for making tactile calendars, first/then boxes and using it for instructional purposes.

Print the template and cut out the cardstock. Once you get used to the pattern, you can easily do it without the template. The height of the easel is approximately 8.5 inches. Heavier paper or cardstock is needed to keep the easel standing.

Photo Description - The primary image contains a photograph of the author, a graphic representation of the words, "Vision Teacher," the name, "TVI Resource," the text "CVI High Contrast Instructional Easel Template." There are two images. The first has three black easels with three items in them (yellow duck, orange juice and purple button). The second image is a photo of the purple button inside the black easel. Instructionally, this was calendar items (bath time, meal time and getting dressed).
