

A Deep Dive into the Digital Math Checklists

April 29, 2025 Webinar

TEAM

TECH EQUITY AND ACCESS IN MATH

Students with visual impairments must develop strong skills to access and create digital math content. Join the Perkins School for the Blind and the TEAM (Tech Equity and Access in Math) Initiative for a session that will explore tools to help TSVIs to create lessons to build these skills, led by Dr. Tina Herzberg, Sara Larkin, and Susan Osterhaus.

The presenters will provide an overview of the newly developed Digital Math Checklists and additional resources tailored to different grade levels. They will also introduce the newly developed Manipulatives Checklist. These Checklists and resources will help teachers of students with visual impairments (TSVIs) ensure that their students possess the necessary knowledge and skills for success in today's digital math classroom.

The session will be recorded. Please register, even if you can not attend, to get access to the recording.

Webinar Objectives

Describe the components of the checklists developed for PreK-grade 3, grades 3-5, middle, and high school students.

List 3 ways they can use the checklists in their own practice.

Identify 3 resources they would like to explore after the session.

April 29, 2025
7:00PM - 8:30 PM EST
